Resistant Materials:

[Joints and Fittings Index Page \(technologystudent.com\)](#)

Guidelines for material research:

1. Never copy straight from textbooks.
2. When you mention a material also refer to your project.
3. Do not download large 'chunks' of writing from the internet and then simply paste on to your research sheets.
4. Use drawings, pictures and photographs to illustrate your research.
5. State clearly why you are going to consider using a material or why you cannot use it.
6. Try to find out the cost of materials as part of your materials research.
